commission a general review of the current state of knowledge of dipterocarp taxonomy, ecology and silviculture, to identify gaps in this knowledge and to spell out priority areas for new research. This action accorded with the views of many members of the informal Round Table on Dipterocarps who had been

~~A Review of Dipterocarps - CIFOR~~

Dipterocarps are one of the best known and commercially important groups of tropical trees. They preside over some of the most magnificent forest formations in the world. Exploitation of dipterocarp-dominated tropical rain forests has expanded rapidly in the past 20 years. Efforts to develop and implement sustainable management practices are being intensified and there is a pressing need for ...

Hopanoids were first detected in the dammar resin of the tropical tree Hopea (Dipterocarpaceae), named in honor of the eighteenth-century British botanist John Hope. 3-Hydroxy- and 3-ketohopanoids have been found in scattered taxa of higher plants. 1 Deoxyhopanoids, on the other hand, occur mainly in bacteria, in a few fungi, and frequently in ferns. 1 A very informative review treats the trove of isoprenoids found in ferns. 44

~~A Review Of Dipterocarps~~

Dipterocarps “can” grow very tall and large, and they form a very large proportion of the rainforest canopy here in Peninsular Malaysia. An extensive study showed that up to 57% of the emergent layer of the lowland forest in Peninsular Malaysia is composed of dipterocarps.

~~Dipterocarp trees—Rainforest Journal~~

Dipterocarpaceae, a dominant family of trees in South-East Asian tropical forests, are remarkable in that they exhibit supra-annual mass-flowering events. The flowering patterns are related to the El Niño Southern Oscillation, but the mechanism that precipitates mass-flowering is still debated.

Dipterocarpaceae contribute to 30% of the total area in lowland evergreen forests in Southeast Asia. The earliest dipterocarp fossils recorded in SE Asia come from Oligocene. We report an occurrence of dipterocarps from 53 Ma sediments of western India based on resin chemistry and pollen data. Asian dipterocarps were originated in Gondwana and dispersed out-of-India into Asia during the middle Eocene.
