This book provides a unique synthesis of concepts and tools to examine natural resource, socio-economic, legal, policy and institutional issues that are important for managing urban growth into the future. The book will particularly help the reader to understand the current issues and challenges and develop strategies and practices to cope with future pressures of urbanisation and peri-urban land, water and energy use challenges. In particular, the book will help the reader to discover underlying principles for the planning of future cities and peri-urban regions in relation to: (i) Balanced urban development policies and institutions for future cities; (ii) Understanding the effects of land use change, population increase, and water demand on the liveability of cities; (iii) Long-term planning needs and transdisciplinary approaches to ensure the secured future for generations ahead; and (iv) Strategies to adapt the cities and land, water and energy uses for viable and liveable cities. There are growing concerns about water, food security and sustainability with increased urbanisation worldwide. For cities to be liveable and sustainable into the future there is a need to maintain the natural resource base and the ecosystem services in the peri-urban areas surrounding cities. This need is increasing under the looming spectre of global warming and climate change. This book will be of interest to policy makers, urban planners, researchers, post-graduate students in urban planning, environmental and water resources management, and managers in municipal councils.

This edited collection is an interdisciplinary study of gems in the early modern world. It examines the relations between the art, science, and technology of gems, and it does so against the backdrop of an expanding global trade in gems. The eleven chapters are organised into three parts. The first part sets the scene by describing how gems moved around the early modern world, how they were set in motion, and how they were pulled together in the course of their travels. The second part is about value. It asks why people valued gems, how they determined the value of a given gem, and how the value of a gem was connected to its perceived place of origin. The third part deals with the skills involved in cutting, polishing, and mounting gems, and how these skills were transmitted and articulated by artisans. The common themes of all these chapters are materials, knowledge and global trade. The contributors to this volume focus on the material properties of gems such as their weight and hardness, on the knowledge involved in exchanging them and valuing them, and on the cultural consequences of the expanding trade in gems in Eurasia and the Americas.

Entrepreneurship and innovation are arguably the main drivers of economic development today. This book explores the two in depth, at both the national and regional levels, using a variety of methodologies. The expert contributors discuss the subject from a policy perspective, with case studies from a host of countries including new member states of the EU as well as established EU member states. Split into three parts, the book focuses on: innovation, entrepreneurial activity and regional development, and entrepreneurship and SME policy.

This fascinating study is the first detailed description of the ancient and enduring trade in beads that spans more than two millennia and once stretched from the Middle East to East Asia and affected areas as far apart as West Africa and the American Pacific coast. Beads are universal and among the earliest art forms. Made of glass, semiprecious stone, or precious organic materials such as amber and coral, they were ubiquitous in the ancient world, serving as decorations, magical charms, mnemonic and counting devices, symbols of wealth and status. Much of the ancient bead trade was incorporated in Asian maritime commerce, and many of the beads involved have Asian origins. Peter Francis, Jr., a pioneer in bead studies, incorporates firsthand knowledge of beads and beadmaking in the field with years of solid, scholarly research, effectively eliminating much of the hearsay and speculation that so often characterizes works on beads. In addition to the production, use, and provenance of beads, he examines the importance of the bead trade for the economies of the countries involved and provides insights into the lives of its many participants: artisans, mariners, and merchants. He covers the widely-dispersed Indo-Pacific beads (sometimes called Trade Wind beads or mutisalah), Chinese glass beads, Middle Eastern glass beads, Indian stone beads, heirloom beads in Southeast Asia and Micronesia, and other minor beads and bead industries involved in the trade.

Describes ancient Egypt's vast resources and the processes that incorporated them in daily life, including animal products, building materials, cosmetics, perfumes and incense, fibers, glazed ware, glass, mummification materials, and more.
