It is known that cars with a manual transmission are equipped with a clutch that performs the function of connecting the engine to the transmission. But in automatic transmissions, this function is performed by the Torque Converter. It can be described as a hydraulic clutch. This part of the car starts the rotation of the engine.

~~Transmission Problems Guide - how to resolve?~~

Just like that of a manual transmission, the automatic transmission's primary job is to allow the engine to operate in its narrow range of speeds while providing a wide range of output speeds. Without a transmission, cars would be limited to one gear ratio, and that ratio would have to be selected to allow the car to travel at the desired top speed. If you wanted a top speed of 80 mph, then the gear ratio would be similar to third gear in most manual transmission cars.
