Medical procedures involve, to a great degree, technical matters, which must be clearly understood first, prior to pursuing a claim that a treatment was attended with malpractice. Moreover, in order to prove the existence of medical malpractice in any case, the legal requirements of the law must be completely satisfied.~~

The US Department of Justice's National Institute of Justice (NIJ) asked the Institute of Medicine (IOM) of The National Academies to conduct a workshop that would examine the interface of the medicolegal death investigation system and the criminal justice system. NIJ was particularly interested in a workshop in which speakers would highlight not only the status and needs of the medicolegal death investigation system as currently administered by medical examiners and coroners but also its potential to meet emerging issues facing contemporary society in America. Additionally, the workshop was to highlight priority areas for a potential IOM study on this topic. To achieve those goals, IOM constituted the Committee for the Workshop on the Medicolegal Death Investigation System, which developed a workshop that focused on the role of the medical examiner and coroner death investigation system and its promise for improving both the criminal justice system and the public health and health care systems, and their ability to respond to terrorist threats and events. Six panels were formed to highlight different aspects of the medicolegal death investigation system, including ways to improve it and expand it beyond its traditional response and meet growing demands and challenges. This report summarizes the Workshop presentations and discussions that followed them.

Despite some significant advances in the creation and protection of rights affecting women's health, these do not always translate into actual health benefits for women. This collection asks: 'What is an effective law and what influences law's effectiveness or ineffectiveness? What dynamics, elements, and conditions come together to limit law's capacity to achieve instrumental goals for women's health and the advancement of women's health rights?' The book presents an integrated, co-referential and sustained critical discussion of the normative and constitutive reasons for law's limited effectiveness in the field of women's health. It offers comprehensive and cohesive explanatory accounts of law's limits and for the first time in the field, introduces a distinction between formal and substantive effectiveness of laws. Its approach is trans-systemic, multi-jurisdictional and comparative, with a focus on six countries in North America, Europe, Asia, and Africa and international human rights case law based on matters arising from Hungary, Portugal, Spain, Slovakia, the Czech Republic, Peru and Bolivia. The book will be a valuable resource for educators, students, lawyers, rights advocates and policymakers working in women's health, socio-legal studies, human rights, feminist legal studies, and legal philosophy more broadly.
