A practical state-of-the-art approach is stressed throughout, and sufficient theory is presented to ensure that students develop a solid understanding of basic quality principles. In *The Story of N*, Hugh S. Gorman analyzes the notion of sustainability from a fresh perspective—the integration of human activities with the biogeochemical cycling of nitrogen—and provides a supportive alternative to studying sustainability through the lens of climate change and the cycling of carbon. It is the first book to examine the social

processes by which industrial societies learned to bypass a fundamental ecological limit and, later, began addressing the resulting concerns by establishing limits of their own. The book is organized into three parts. Part I, “ The Knowledge of Nature, ” explores the emergence of the nitrogen cycle before humans arrived on the scene and the changes that occurred as stationary agricultural societies took root. Part II, “ Learning to Bypass an Ecological Limit, ” examines the role of science and market capitalism in accelerating the pace of innovation, eventually allowing humans to bypass the activity of nitrogen-fixing bacteria. Part III, “ Learning to Establish Human-Defined Limits, ” covers the twentieth-century response to the nitrogen-related concerns that emerged as more nitrogenous

The modern field of software metrics emerged from the computer modeling and "statistical thinking" services of the 1980s. As the field evolved, metrics programs were integrated with project management, and metrics grew to be a major tool in the managerial decision-making process of software companies. Now practitioners in the software industry have

In an era of rapidly shrinking resources, efficient utilization of public resources is of paramount importance. Health care, social services, education, law enforcement, and other fields have established their own standards against which program operations are assessed. National accrediting bodies have implemented systems of rigorous peer review to ensure the quality of program processes and outcomes. Nongovernmental organizations must demonstrate success in achieving their stated goals in order to sustain or expand program funding. In the 21st century, process (how programs are organized and how work is conducted) has become as important as outcomes in determining program effectiveness. Responding to these dynamic challenges, the authors utilize concrete case studies to immerse students in

the techniques of program evaluation. They effectively examine systems theory, project planning, queuing theory, cost-benefit analysis, and organization processes (including standards-based program accreditation), providing practical examples in an easy-to-comprehend style. In addition, comprehensive discussions explain how process intervention is utilized to achieve program adaptations and strategic change. Like its highly regarded predecessors, the latest edition features evaluation exercises designed to facilitate student development of indicators and measures when dealing with real-world programs. An Instructors Manual provides solutions to the case studies in the appendix of the text, further clarifying the program planning and evaluation process.
