Future Crimes Everything Is Connected
Future Crimes paints a sobering picture of how rapidly evolving threats to technology can lead to disasters that replicate around the world at machine speed. Goodman clearly demonstrates that we are following a failed cybersecurity strategy that requires new thinking rather than simply more frameworks, more information sharing, and more money.

The Cybersecurity Canon: Future Crimes: Everyone Is ...

Everything is a computer. Ovens are computers that make things hot; refrigerators are computers that keep things cold. These computers - from home thermostats to chemical plants - are all online. All computers can be hacked. And Internet-connected computers are the most vulnerable.

NEW YORK TIMES and WALL STREET JOURNAL BESTSELLER ONE OF THE WASHINGTON POST'S 10 BEST BOOKS OF 2015 One of the world's leading authorities on global security, Marc Goodman takes readers deep into the digital underground to expose the alarming ways criminals, corporations, and even countries are using new and emerging technologies against you—and how this makes everyone more vulnerable than ever imagined. Technological advances have benefited our world in immeasurable ways, but there is an ominous flip side: our technology can be turned against us. Hackers can activate baby monitors to spy on families, thieves are analyzing social media posts to plot home invasions, and stalkers are exploiting the GPS on smart phones to track their victims' every move. We all know today's criminals can steal identities, drain online bank accounts, and wipe out computer servers, but that's just the beginning. To date, no computer has been created that could not be hacked—a sobering fact given our radical dependence on these machines for everything from our nation's power grid to air traffic control to financial services. Yet, as ubiquitous as technology seems today, just over the horizon is a tidal wave of

scientific progress that will leave our heads spinning. If today's Internet is the size of a golf ball, tomorrow's will be the size of the sun. Welcome to the Internet of Things, a living, breathing, global information grid where every physical object will be online. But with greater connections come greater risks. Implantable medical devices such as pacemakers can be hacked to deliver a lethal jolt of electricity and a car's brakes can be disabled at high speed from miles away. Meanwhile, 3-D printers can produce AK-47s, bioterrorists can download the recipe for Spanish flu, and cartels are using fleets of drones to ferry drugs across borders. With explosive insights based upon a career in law enforcement and counterterrorism, Marc Goodman takes readers on a vivid journey through the darkest recesses of the Internet. Reading like science fiction, but based in science fact, Future Crimes explores how bad actors are primed to hijack the technologies of tomorrow, including robotics, synthetic biology, nanotechnology, virtual reality, and artificial intelligence. These fields hold the power to create a world of unprecedented abundance and prosperity. But the technological bedrock upon which we are building our common future is deeply unstable and, like a house of cards, can come crashing down at any moment. Future Crimes provides a mind-blowing glimpse into the dark side of technological innovation and the unintended consequences of our connected world. Goodman offers a way out with clear steps we must take to survive the progress unfolding before us. Provocative, thrilling, and ultimately empowering, Future Crimes will serve as an urgent call to action that shows how we can take back control over our own devices and harness technology's tremendous power for the betterment of humanity—before it's too late.

* THE NEW YORK TIMES BESTSELLER * * Future-proof yourself and your business by reading this book * Technological advances have benefited our world in immeasurable ways, but there is an ominous flipside. Criminals are often the earliest, and most innovative, adopters of technology and modern times have led to modern crimes. Today's criminals are stealing identities, draining online bank-accounts and wiping out computer servers. It's disturbingly easy to activate baby cam monitors to spy on families, pacemakers can be hacked to deliver a lethal jolt, and thieves are analyzing your social media in order to determine the best time for a home invasion. Meanwhile, 3D printers produce AK-47s, terrorists can download the recipe for the Ebola virus, and drug cartels are building drones. This is just the beginning of the tsunami of technological threats coming our way. In Future Crimes, Marc Goodman rips open his database of hundreds of real cases to give us front-row access to these impending perils. Reading like a sci-fi thriller, but based in startling fact, Goodman raises tough questions about the expanding role of technology in our lives. Future Crimes is a call to action for better security measures worldwide, but most importantly, will empower readers to protect themselves against these looming technological threats - before it's too late.

The terrifying new role of technology in a world at war

From one of the world's leading authorities on global security, Future Crimes takes readers deep into the digital underground to illuminate the alarming ways criminals, corporations, and even countries are using new and emerging technologies against you--and how this makes everyone more vulnerable than you ever thought possible. Technological advances have benefited our

world in immeasurable ways--but there is an ominous flip side. Criminals are often the earliest, and most innovative, adopters of technology, and modern times have lead to modern crimes. Today's criminals are stealing identities, draining online bank accounts and wiping out computer servers. It's disturbingly easy to activate baby monitors to spy on families, pacemakers can be hacked to deliver a lethal jolt of electricity, and thieves are analyzing your social media in order to determine the best time for a home invasion. In essence, this story is about how a certain person was searching his bookshelf for something to read and in the end found a book, which turned out to be the source, from which it is possible to obtain absolutely any kind of information about absolutely any person. Meaning, information to the smallest particulars and details about what his or her qualities of personality are, how he or she lives, what he or she really wants to achieve, what he or she hides, and much more. And, it does not matter, if the subject is some person, who lived in the distant past or lives in the present or someone, who will live in the future. Since, as it turned out later on, this literary monument is nothing other than the Catalog of human population. In other words, the encyclopedia of Homo sapiens; in essence, the same as encyclopedias, reference books for specialists, which contain complete information about representatives of a particular subspecies of animals, plants, etc. Although at some point, the course of this story turned banal: "bad guys" from security services, intelligence services, politics decided to not only use this source of knowledge for their dirty deeds, but also to appropriate it solely for their personal use. And, the way they tried to do this is also banal: by physically destroying the author of discovery of the Catalog of human population and all of his colleagues. However, the ending of this story makes it stand out from the category of ordinary spy stories. At least because the main characters of this story managed to survive not due to favorable concatenation of circumstances or someone's help, but thanks to that knowledge, which they discovered in the ancient text, which turned out to be the Catalog of human population. Of course, such an outcome upset and continues to upset not only the Russian special services, but also all those people in whose way developers of the Catalog of human population got. And, in this civilization, there are countless numbers of such people: from psychologists (who become no longer needed by anyone) to organizers of this civilization themselves. Since from the standpoint of the Catalog of human population—technogenic civilization without a human, which they lovingly built for many centuries, is simply trash, to put it mildly, and beneath all criticism. And, they themselves are also trash. However, regular people, who (thanks to the scientific discovery made by Andrey Davydov) got the source with answers to all of their questions and individual recipes, now no longer need to pay "experts on the human soul" for being shamelessly fooled. Therefore, whoever tries to kill developers of the Catalog of human population in the future must know that it is no longer possible, as they already became part of history of humanity. After all, at the current stage of development, a Homo sapiens has only one possibility to continue to live after death, to live through the ages: in the product that he/she created. And, those, who tried and continue to try to kill them, were nobodies and will remain nobodies, who one day will cease to exist without leaving a trace. As for organizers of this "civilization"—maybe instead of trying to find new recipes to destroy "excess billions" and trying to examine human potential using Neanderthal methods, it would be more reasonable not only to find out the recipe of how to make Homo sapiens a 100% controllable producer and consumer from the source (which, by the way, seems to have been left to humanity by creators of nature and a human on this planet), but also how to build a civilization without quotes? After all, it only seems to them that they are the main deceivers, while in reality they were fooled, and fooled majorly.

Leadership. Creativity. Innovation. When you put it all together, EVERYTHING CONNECTS. The constant cascade of new technologies and social changes is creating a more empowered population. Workforces are increasingly dispersed, demanding of self-expression, and quite possibly disengaged. Within this topsy-turvy context, leaders must spark creativity, drive innovation, and ensure sustainability. What are the remedies? The newest problems of the world find solutions in the oldest and time-less practices such as mindfulness, authenticity, and perseverance—because Everything Connects. Everything Connects is a kaleidoscopic view of the way humans—by being able to think out of the box—have been able to achieve greatness for themselves, their organizations, and the world at large. It is your step-by-step guide for working with yourself and others—for meaningful success. Using real-life practical experiences, serial entrepreneur and thought leader Faisal Hoque teams up with journalist Drake Baer to provide a personal and professional playbook that shows how to: Holistically connect the "when" and "what" with who you are Inspire and lead inside and outside of your organization Generate ideas, grounded decisions, and long-term value Part philosophy, part business, and part history, Everything Connects offers the wisdom of 2,500-year-old Eastern philosophies and the interconnected insights of Leonardo da Vinci. Couple that with Fortune 100 corporate cross pollination for creativity and startup thinking for how to adapt with ease, and you'll quickly discover that Everything Connects. This isn't just a quick fix for your next financial quarter; this is how you succeed in the long run. It is a systemization of the best practices of spirituality and entrepreneurship—loaded with knowledge, humor, and humanity.

Are you ready for the IoT revolution? The Internet of Things (IoT) will soon be everywhere—embedded in interconnected devices we'll use every day. Already, cars, appliances, and wearables transmit realtime data to improve performance . . . and new IoT products can even save your life. Consumer goods are just the tip of the iceberg. Amid projections that 30 billion smart devices will be linked in the near future, traditional companies such as Siemens, GE, and John Deere are preparing for profound changes to management, strategy, manufacturing, and maintenance. With the IoT, for example, sensors warn when a critical assembly-line part is about to break, or track how customers actually use products. Data hubs collect and share information instantly with departments, supply chains, partners, and customers— anchoring the organization and replacing hierarchies with circular systems. The Future is Smart documents the shifts now under way. Written by a leading IoT strategist, the book explains how companies are tapping technology to: Optimize supply chains • Maximize quality • Boost safety • Increase efficiency • Reduce waste • Cut costs • Revolutionize product design • Delight customers For those who are ready, the opportunities are endless. This big-think book reveals concrete actions for thriving in this new tech-enabled world.

The charismatic forger immortalized in Catch Me If You Can exposes the astonishing tactics of today's identity theft criminals and offers powerful strategies to thwart them based on his second career as an acclaimed fraud-fighting consultant. When Frank Abagnale trains law enforcement officers around the country about identity theft, he asks officers for their names and addresses and nothing more. In a matter of hours he can obtain everything he would need to steal their lives: Social Security numbers, dates of birth, current salaries, checking account numbers, the names of everyone in their families, and more. This illustrates how easy it is for anyone from anywhere in the world to assume our identities and in a matter of hours devastate our lives in ways that can take years to recover from. Considering that a fresh victim is hit every four seconds, Stealing Your Life

is the reference everyone needs by an unsurpassed authority on the latest identity theft schemes. Consider these sobering facts: • Six out of ten American companies and government agencies have already been hacked. • An estimated 80 percent of birth certificate requests are fulfilled through the mail for people using only a name and a return address. • Americans write 39 billion checks a year, and half of them never reconcile their bank statements. • A Social Security number costs $49 on the black market. A driver's license goes for $90. A birth certificate will set you back $79. Abagnale offers dozens of concrete steps to transform anyone from an easy mark into a hard case that criminals are likely to bypass: • Don't allow your kids to use the computer on which you do online banking and store financial records (children are apt to download games and attachments that host damaging viruses or attract spyware). • Beware of offers that appeal to greed or fear in exchange for personal data. • Monitor your credit report regularly and know if anyone's been "knocking on your door." • Read privacy statements carefully and choose to opt out of sharing information whenever possible. Brimming with anecdotes of creative criminality that are as entertaining as they are enlightening, Stealing Your Life is the practical way to shield yourself from one of today's most nefarious and common crimes.
