Be Serious, There's No Difference Between the Federal ...

The English language has many words much like there, their and they're. Most native English speakers pronounce each the same way (they're homophones, or words that make the same sounds); therefore, it can be tricky to determine which spelling fits the way it is being used in each case.

How to Use There, Their and They're: 8 Steps (with Pictures)

Letter From The Editor: We wish there was a difference, but there's not. By Dan Flynn on December 10, 2020. Opinion.

"Sweet, tender, and true!" - Laurie Halse Anderson Jesse cuts her own hair with a Swiss Army knife. She wears big green fisherman's boots. She's the founding (and only) member of NOLAW, the National Organization to Liberate All Weirdos. Emily wears sweaters with faux pearl buttons. She's vice president of the student council. She has a boyfriend. These two girls have nothing in common, except the passionate "private time" they share every Tuesday afternoon. Jesse wishes their relationship could be out in the open, but Emily feels she has too much to lose. When they find themselves on opposite sides of a heated school conflict, they each have to decide what's more important: what you believe in, or the one you love?

One of the most important life skills is the ability to be receptive to the ideas and opinions of others, particularly when they differ sharply from your own. Nature has programmed us to be wary of things that are

new, foreign or different. But, in the 21st Century the pendulum seems to have swung too far toward "I'm right and you're wrong; end of discussion." This book is designed to show middle school children and adults how different people (or groups) can have very different beliefs - yet that fact doesn't necessarily mean that one of the people (or groups) is wrong! In fact, this story graphically demonstrates how it's possible for all their different opinions (or beliefs) to all be correct. Not only that, the story also shows how all the groups' appreciation for their sacred mountain was ultimately enhanced by learning of the other groups different perceptions of it. This story also introduces young people to the challenges of Global Warming and provides a symbolic example of how United Nations (UN) helps those people most vulnerable to it.

Carl Friedrich Kielmeyer (1765-1844) was the 'father of philosophy of nature' owing to his profound influence on German Idealist and Romantic Naturphilosophie. With the recent growth of interest in Idealist and Romantic philosophy of nature in the UK and abroad, the importance of Kielmeyer's work is being increasingly recognised and special attention is being paid to his influence on biology's development as a distinct discipline at the end of the eighteenth century. In this exciting new book, Lydia Azadpour and Daniel Whistler present the first ever English translations of key texts by Kielmeyer, along with contextual and interpretative essays by leading international scholars, who are experts on the philosophy of nature and the formation of the life sciences in the late eighteenth century. The topics they cover include: the laws of nature, the concept of force, the meaning of 'organism', the logic of recapitulation, Kielmeyer and ecology, sexual differentiation in animal life and Kielmeyer's relationship to Kant, Schelling and Hegel. In doing so, they provide a comprehensive English reference to Kielmeyer's historical and contemporary significance.

Every child has a right to education. Parents are encouraged to play an active role in their children's education. While many parents participate with enthusiasm in school related activities, some are barely seen in their children's school. Some people assume that parents of children placed in a self-contained setting attend IEP meetings and other school events more than parents of children in an inclusive setting. This study aimed at investigating whether there was a difference between children's self-contained placement versus inclusion setting in the amount of parental/guardian school contact per year. Data collected were for five school years. Findings of the study did not show any significant difference between parents of children in a self contained setting and inclusion setting in the number of parental/guardian school contact per year.

This volume focuses on the differences between the Covenant and Dispensational systems of theology and examines their diverse approaches to such issues as: -- God's Ultimate Purpose for History-- God's Program for the Nation of Israel-- The Significance of Several Key Biblical Covenants-- The Nature and Beginning of the Church-- The Christian's Relationship to the Mosaic Law and GraceThe book is written in easy-to-understand, non-technical language and has received favorable response from lay people, pastors, students, and reviewers.

The Nature of Difference documents how distinctions between people have been generated in and by the life sciences. Through insightful commentaries and a wide-ranging selection of primary documents by the editors, it charts the shifting boundaries of science and race through more than two centuries of American history. The documents, primarily writings by authoritative, eminent scientists intended for their professional peers, show how various sciences of race have changed their object of study over time: from racial groups to types to populations to genomes and beyond. The book's thematic and synthetic approach reveals the profoundly diverse array of practices--countless acts of observation, quantification, and experimentation--that enabled the consequential categorizations we inherit. The documents--most reproduced in their entirety--range from dictionary definitions of race published between 1886 and 2005 to an exchange of letters between Benjamin Baneker and Thomas Jefferson; from Samuel Cartwright's 1851 "Report on the Diseases and Physical Peculiarities of the Negro Race" to a 1950 UNESCO declaration that race is a social myth; from a 1928 paper detailing the importance of the glands in shaping human nature to a 2005 report of the discovery of a genetic basis for skin color. Such documents, given context by the editors' introductions to each thematic chapter, provide scholars, journalists, and general readers with the rich historical background necessary for understanding contemporary developments in racial science. Evelyn M. Hammonds is Professor of the History of Science and Professor of African and African American Studies at Harvard University. She is the author of *Childhood's Deadly Scourge: The Campaign to Control Diphtheria in New York City, 1880-1930*. Rebecca M. Herzig is Associate Professor of Women and Gender Studies at Bates College and the author of *Suffering for Science: Reason and Sacrifice in Modern America*.
