Can slaving and enslavement be seen as a significant transformative phenomena in Iron Age Europe and, if so, how would this affect the interpretation of (old and new) archaeological evidence? This exploratory study of the dynamics of Iron Age slaving and enslaving in Northwest Europe contributes to a complex but neglected topic.

The ancient Greeks invented written law. Yet, in contrast to later societies in which law became a professional discipline, the Greeks treated laws as components of social and political history, reflecting the daily realities of managing society. To understand Greek law, then, requires looking into extant legal, forensic, and historical texts for evidence of the law in action. From such study has arisen the field of ancient Greek law as a scholarly discipline within classical studies, a field that has come into its own since the 1970s. This edited volume charts new directions for the study of Greek law in the twenty-first century through contributions from eleven leading scholars. The essays in the book ' s first section reassess some of the central debates in the field by looking at questions about the role of law in society, the notion of " contracts, " feuding and revenge in the court system, and legal protections for slaves engaged in commerce. The second section breaks new ground by redefining substantive areas of law such as administrative law and sacred law, as well as by examining sources such as Hellenistic inscriptions that have been comparatively neglected in recent scholarship. The third section evaluates the potential of methodological approaches to the study of Greek law, including comparative studies with other cultures and with modern legal theory. The volume ends with an essay that explores pedagogy and the relevance of teaching Greek law in the twenty-first century.

The Middle East captured front pages worldwide for the alleged Arab Spring in 2011. Large segments of the populations of Tunisia, Libya, Egypt, and Syria took to the streets to voice their protest against autocratic regimes and to demand democracy. Violent uprisings followed, but the prospects of liberal democracy are still uncertain and distant. No wonder. Democratization took a couple of centuries in the West. And even today, well-established Western democracies are under pressure from globalization and regionalization, and many claim representative democracy is in need of renewal. This collection of essays focuses on a number of theoretical issues associated with democracy and democratization. Divided into three parts, the first part analyzes how democracy may be understood, explained and measured. The second part deals with issues of democracy, international stability, and development in fragile and developmental states and regions. The third part of the book looks at representative democracy in old democracies and its potential for development.

This volume takes a critical look at the gender of tax policy around the world. Contributors based in eight different countries examine the profound effects that gender norms and practices have had in shaping tax law and policy, and how taxation in turn impacts upon the possibilities for equality along gender, race, class, sexuality and other lines. Chapters explore how the gendered fiscal state might be theorised; how structural choices about rates and bases in tax policy design contribute to gender inequality; how tax policy affects family configurations and perceptions of what constitutes family; how fiscal systems impact on savings and wealth accumulation by women and men; and the role of different policy-making processes and institutions in occluding and sometimes challenging these patterns. Most significantly, perhaps, the book explores these questions in an international frame, traversing countries and continents. The conclusion: fiscal policy has deep rooted, long standing gender implications that affect virtually every aspect of our social, political, and economic lives whether we live in Canada, Australia or Kenya.

"As Malaysia's economy grows and flourishes, strong new links are being forged with other developing countries in the region and beyond. This book examines these new links. It argues that as many countries with which Malaysia has new links are Indian Ocean countries, many of them Muslim countries, a new style trading network is being formed, a network with Islamic characteristics, which echoes Indian Ocean Islamic trading networks of earlier times"-Publisher's description.

For the first time in history, the globe is dominated by one economic system. Capitalism prevails because it delivers prosperity and meets desires for autonomy.
