Johan Rydberg use Balmers work to derived an equation for all electron transitions in a hydrogen atom. Here is the equation:  $R = \frac{1}{\lambda} = R_H \left( \frac{1}{n_1^2} - \frac{1}{n_2^2} \right)$   
Rydberg Constant  $1.0974 \times 10^7 \text{ m}^{-1}$ ;  $\lambda$  is the wavelength; n is equal to the energy level (initial and final) If we wanted to calculate

energy we can adjust  $R$  by multiplying by  $h$  (planks constant) and  $c$  (speed of light)

## ~~Energy, Wavelength and Electron Transitions~~

The energy of a photon of light =  $hf$  and the work function ( $f$ ) is the minimum energy required to remove an electron from the surface of the material. So we can see from the equation above that if the light does not have a big enough frequency ( $f$ ) so that the photon has enough energy to overcome the work function ( $f$ ) then no photoelectrons will ...

## ~~LIBERATED ENERGY~~ Solar Panels and Battery Storage

It is expressed in two forms: the Helmholtz free energy  $F$ , sometimes called the work function, and the Gibbs free energy  $G$ . If  $U$  is the internal energy of a system,  $P V$  the pressure-volume product, and  $T S$  the temperature- entropy product (  $T$  being the temperature above absolute zero ), then  $F = U - T S$  and  $G = U + P V - T S$ .

of a few champions in place of mana. It is represented by a yellow bar instead of blue... Since energy regenerates much faster than mana, energy champions are not at the risk of depleting their resource over time. However, due to the maximum amount of energy being capped at a low amount with no growth per level, their ...

~~Energy | League of Legends Wiki | Fandom~~

Rainbow, series of concentric coloured arcs that may be seen when light from a distant source—most commonly the Sun—falls upon a collection of water drops—as in rain, spray, or fog. The rainbow is observed in the direction opposite to the Sun.

Set Up the Rainbow . On a fire-proof surface, line up small piles of powder for each of the colorants. You only need a small pinch of each chemical (1/2 teaspoon or less). Usually, you'll run your rainbow red, orange, yellow, green, blue and violet (or the opposite direction). It works best if you try to keep the colorant chemicals separate. When the fuel is added, some of the colors naturally will run together.

One of the first things you come across when you start to learn about chakra colors, is the affect of each on the energy centers.. Most people who have a basic knowledge of the 7 chakras can tell you the color and location of each, but aren't able to tell you about each chakra's individual role.. Color is familiar and comforting.
