a) Let be the set of right cosets of H . H acts on by right multiplication. Denoting the set of fixed points by 0 , we have: $0 =$
 $fHa: Hah = Ha$ for all $h \in H, g \in H$
 $a \in H$ for all $h \in H = Ha: a \in H$
 $= fHa: Ha = Hg = fHa: a \in N_G(H)$

One of the challenges many mathematics students face occurs after they complete their study of basic calculus and linear

important difference of this book from the majority of modern college geometry texts is that it avoids axiomatics. The students using this book have had very little experience with formal mathematics. Instead, the focus of the course and the book is on

interesting theorems and on the techniques that can be used to prove them. This makes the book suitable to second- or third-year mathematics majors and also to secondary mathematics education majors, allowing the students to learn how to write

Character theory is a powerful tool for understanding finite groups. In particular, the theory

has been a key ingredient in the classification of finite simple groups. Characters are also of interest in their own right, and their properties are closely related to properties of the structure of the underlying group. The book begins by developing

the module theory of complex group algebras. After the module-theoretic foundations are laid in the first chapter, the focus is primarily on characters. This enhances the accessibility of the material for students, which was a major consideration in the
