Spinal Cord Injuries (SCIs) are a significant cause of disability, with profound—and in many cases devastating—consequences. According to recent data, about 12,000 SCIs occur annually in the United States, and up to 250,000 Americans are living with SCIs. Most victims are aged 16 to 30; more than 80% are males.

From a hospital admittance to discharge to outpatient rehabilitation, Spinal Cord Injuries addresses the wide spectrum of rehabilitation interventions and administrative and clinical issues specific to patients with spinal cord injuries. Comprehensive coverage includes costs, life expectancies, acute care, respiratory care,

documentation, goal setting, clinical treatment, complications, and activities of daily living associated with spinal cord patients. In addition to physical therapy interventions and family education components, this resource includes content on incidence, etiology, diagnosis, and clinical features of spinal cord injury. Case Studies with clinical application thinking exercises help you apply knowledge from the book to real life situations. Thoroughly referenced, evidence-based content provides the best evidence for treatment based on the most current research. Tables and boxes throughout each chapter organize and summarize important information for quick reference. Clinical Note boxes provide at-a-glance access to helpful tips. Over 500 clinical photos, line drawings, radiographs, and more bring important concepts to life. Highly respected experts in spinal cord injury rehabilitation, editors Sue Ann Sisto, Erica Druin, and Martha Sliwinski, provide authoritative guidance on the foundations and principles of practice for spinal cord injury. Companion DVD includes video clips of the techniques described throughout the book that demonstrate how to apply key concepts to practice.

Combining 25 years of clinical, research and teaching experience, Dr Lisa Harvey provides an innovative 5-step approach to the physiotherapy management of people with

spinal cord injury. Based on the International Classification of Functioning, this approach emphasises the importance of setting goals which are purposeful and meaningful to the patient. These goals are related to performance of motor tasks analysed in terms of 6 key impairments. The assessment and treatment performance of each of these impairments for people with spinal cord injury is described in the following chapters: training motor tasks strength training contracture management pain management respiratory management cardiovascular fitness training Dr Harvey develops readers' problem-solving skills equipping them to manage all types of spinal cord injuries. Central to these skills is an understanding of how people with different patterns of paralysis perform motor tasks and the importance of different muscles for motor tasks such as: transfers and bed mobility of people wheelchair mobility hand function for people with tetraplegia standing and walking with lower limb paralysis This book is for students and junior physiotherapists with little or no experience in the area of spinal cord injury but with a general understanding of the principles of physiotherapy. It is also a useful tool for experienced clinicians, including those keen to explore the evidence base that supports different physiotherapy interventions.

rehabilitation care of persons with spinal cord injuries and disorders draws on the ever-expanding scientific and clinical evidence base to provide clinicians with all the knowledge needed in order to make optimal management decisions during the acute, subacute, and chronic phases. A wealth of information is presented on the diverse medical consequences and complications encountered in these patients and on the appropriate rehabilitative measures in each circumstance. The coverage encompasses all forms of spinal cord injury and all affected organ systems. Readers will also find chapters on the basics of functional anatomy, neurological classification and evaluation, injuries specifically in children and the elderly, and psychological issues. The book will be an invaluable aid to assessment and medical care for physicians and other professional personnel in multiple specialties, including physiatrists, neurosurgeons, orthopedic surgeons, internists, critical care physicians, urologists, neurologists, psychologists, and social workers.
